### ***REJECTION ON PRIOR ART***

**Claims 21-27** are rejected under **35 U.S.C. ' 103(a)** as being unpatentable over the patent to Hjertman (5,435,076) in view Galy (5,148,450) or Meyer (4,491,876). The patent to Hjertman discloses the method of forming an ampoule by inserting a first piston 3 into the front chamber 5 of the barrel, filling the front chamber with a solution, performing a lyophilizing step, sealing the front opening of the barrel by inserting a sealer 11 into the opening, connecting and securing the sealer with the sleeve, filling the second chamber with material 6 and inserting a second piston 25 into the barrel. The patent does not disclose how the first piston is inserted into the barrel. The patents to Galy and Meyer show the insertion of a piston/movable plug 9 and 25, respectively, and the filling material through the same end of the ampoule since the diameter of the ampoules is constant. It would have been obvious to one of ordinary skilled in the art to insert the piston and material of Hjertman through the same front opening as shown by the secondary references since the diameter of the Hjertman piston is the same as the diameter of the ampoule.

### ***RESPONSE TO APPLICANT'S ARGUMENTS***

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection. Note that Hjertman shows in Figure 3 an ampoule in which the barrel has a constant diameter which is the same as the siiameter of the piston 3. Since the barrel is empty at the time of insertion of the piston, there are only two options for inserting the piston, i.e. through the front end or through the rear end. It would have been obvious to one of ordinary skilled in the art to eliminate the turning over steps of the ampoule and perform as many steps as possible from the same end of the ampoule by inserting both the filling material

and the piston through the same front end. This is further shown to be the case by the secondary references that teach the same end insertion of the piston as the filling material.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
